

GymStyle System

## General Vision

**Problema:** Innovation in Access Systems for Gyms

**Solution:** Usage of biometry and tags for identification of students and training session printing.

**Advantages:** Innovative solution, oriented to specific needs of access control and integrated exercises series.

**Benefits:** Innovative design, simple installation, fingerprint collection in the turnstile itself.

**Target:** Gyms, Services.

## ***GymStyle - The first access control system exclusive for gyms***

*GymStyle is a new access control concept for gyms, allowing for training sessions to be printed by the student's entrance turnstile.*

RWTECH, partner of ACURA Global for access control solutions, developed a new concept: GymStyle. The identification can be done through biometric fingerprint or proximity through the AcuProx Keyfob and the turnstile has an automatic motor system, which eases the student's passage. The solution also has a software which allows the management of all students, allowing the registration with digital photo, choice of plans, payment system and reports.

## Ideal Products for the Solution

### 500.312 - FAS-02 OEM Module

The FAS-02 module is a biometric reader ideal for integration with biometric authentication systems.

## About the Solution

**The Client:** RWTECH is a dynamic company, with innovative spirit and strong technologic motivation. RW is part of a corporative group with Enterplak, specialized in outsourcing of eletroeletronic products' manufacturing, with clients from multinational companies. The synergy in-between the group makes all the steps of the productive process contemplated, be their own products' or their clients'.

**Proposed Challenge:** Development of an innovative solution, focused on necessities based on access control and integrated exercise series for gyms.

**Equipment:** Biometric OEM - FAS-02 modules and proximity AcuProx Keyfobs.

**Solution:** Usage of biometry and tags for identification of students and training session printing.

**Features / Practical improvements:** The GymStyle software is a web platform, which runs straight from the internet browser. Aside from the register and evaluation status, it has a payment and management reports system, which allow for different types of access block, such as: lack of payment, max number of weekly visits and time periods.

**Gains / Benefits:** Innovative solution, oriented to specific needs of access control and integrated exercises series.

ACURA has a focus on the market of general identification, with emphasis on RFID (radiofrequency identification), providing RFID Tags (Transponders), Proximity Cards, RFID Readers and Data Collectors.
